from the light source towards the aperture of the tubular reflector.

- B3  
Sub  
C4
7. (Twice Amended) A tubular reflector comprising:
- a semi-circular reflector having a tubular light source mounted in the semi-circular reflector, the semi-circular reflector reflecting light emanating from the tubular light source; and
  - a multi-faceted reflector coupled to the semi-circular reflector, the multi-faceted reflector having at least two facets positioned at angles to one another so that light emanating from the tubular light source is reflected away from the light source.

- B4  
Sub  
C5
14. (Twice Amended) A tubular lighting device comprising:
- a housing portion having an interior reflecting surface;
  - a first reflective finish disposed on the interior reflecting surface;
  - a reflector portion coupled to the interior reflecting surface;
  - a tubular light source mounted in the semi-circular reflector portion, the semicircular reflector portion formed around the tubular light source;
  - a second reflective finish disposed on the semi-circular reflector portions; and
  - a lens portion coupled to the housing portion;
- such that the reflective finish reflects light from said tubular light source towards the lens portion.

#### REMARKS

Included with this Request for Continued Examination Submission is a petition for a one-month extension of time and the requisite fee.

In the Office Action mailed October 10, 2001, the Examiner:
